NEW FEATURE
Effective ppi

Monitor the effective ppi within CI HUB Smart Link Tab

Question
I am placing images from the DAM directly into the layout via CI HUB Connector. Can I check the effective ppi of the placed images within CI HUB? I need at least 300 ppi resolution.

Answer
Yes - that is possible. You can define a minimum resolution in the settings. The CI HUB Smart Linking warns you if the resolution falls below the minimum "effective ppi" (1) (2).
The effective PPI is displayed when you hover the mouse over the warning (3). In addition, you can make the values permanently visible in the detail view (4) (5).

With **CI HUB Smart Linking**, you can manage, organize, push and pull digital assets from within your application.

Recommendation
Have a look at the **video with a detailed explanation** and simplify your daily tasks with CI HUB.

Go to the "Settings" Tab.
Enable the PPI check feature and enter a minimum resolution.

If the effective value falls below the minimum, a ppi warning is displayed.

The mouse over shows details.

You can also make the values of the current and effective ppi permanently available.

Just add both values in the columns settings.
