CI HUB

March 2023

NEW FEATURE

Dynamic Custom Metadata

Dynamic Custom Metadata

Managing metadata from our DAM within my application requires a smart tool like CI HUB.

[▶ YouTube]

Visit our channel to get your goals on track.

! This feature depends on the capabilities of the particular API. Please contact your DAM provider for details.

Question
Can I display and use customized metadata from my source system in the CI HUB Connector in addition to the standard metadata?

Answer
Yes - CI HUB has the right solution for this. Metadata fields are now "grouped" in areas (Basic, XMP, EXIF, IPTC, and Custom). The display of metadata content is dynamic. No content - no show. Customized metadata are marked with an asterisk (*). In the selection overview, custom metadata fields are marked with a darker blue. You can also rearrange the order by simply dragging and dropping the blue elements. If you hover the label, the source system, the set name, and the label are displayed.
This new feature is also available for the list view.
And, of course: You can drag and drop basic or customized metadata content into your layout or pre-formatted text frames.

By the way: Have you noticed that helpful hint?
Double-clicking on an asset takes you to the detail view, and double-clicking on the detail view leads back to the tile view.

Recommendation
Have a look at the **video with a detailed explanation** and simplify your daily tasks with CI HUB.
